

Practise counting in tens from any number.

E.g. 6, 16, 26, 36

A number  $\times 2$  is just a number doubled!  
E.g.  $14 \times 2$  is really  $14 + 14$

Practise with 1 or 2 digit numbers

Practise doubling single numbers.

E.g.  $6+6$

Then 2-digit numbers  
E.g.  $16 + 16$

Add two 2-digit number together - partition the numbers in your head.

E.g.:  $24 + 24$  is  $20+20$  and  $4+4$  added together

Chant your times tables - then cover the numbers like we do in class on the ruler and test yourself!

**Switch on your number brain!**

Add 9 to different numbers by adding 10 and taking 1 away!

E.g.  $17 + 9 = 17 + 10 (27) - 1 = 26$

Take away 9 by taking away 10 and then adding 1 back on.

E.g.  $17 - 9 = 17 - 10 (7) + 1 = 8$

Add 11 to different numbers by adding 10 then adding 1 more!

E.g.  $17 + 11 = 17 + 10 (27) + 1 = 28$

Take away 11 by taking away 10 and then taking 1 more off.

E.g.  $17 - 11 = 17 - 10 (7) - 1 = 6$

Round two digit numbers to the nearest ten.

E.g. 47 to 50 or 43 to 40  
Challenge yourself to round three digit numbers as well!
